ewolution of water

Contaminant retention of the NFP Premium cartridge

Parameters	Certifying authority	
Lead ¹	TÜV Umwelt	more than 90%*
Copper ¹		
Bacteria Escherichia coli ² , Enterococcus faecalis ² , Staphylococcus aureus, Staphylococcus haemolyticus, Enterobacter cloacae, Pseudom. Aeruginosa, Bacillus subtilis	GFT / Uni Bielefeld	more than 99%*
Microorganisms Entam. Coli, Giardia Lamblia, Cryptosporidium parvum, Hymenolepis nana, Schistosoma mansoni, Ascaris suum		
Fungi/Yeasts Candida albicans, Rhodotorula mucilaginosa, Saccharomyces cerevisiae		
Chlorine ¹		
Chloroform ¹	tti Magdeburg GmbH / FH Magdeburg	more than 99%*
Lindane ¹		
DDT ¹		
Atrazine ¹		
Medical residues ¹ Clotfrinsäure, Carbamazepin, Ibuprofen Diclofenac, Ketoprofen, Propiphenazon	TU Berlin	
Polare Pesticides ¹ Bentazon, 2,4 D, MCPA, p,p'-DDA, Dichlorprop., Mecoprop.		

¹ Test with load over filter capacity of 10,000 liters

² Test with load over a period of 6 months

Cartridge change: Depending on the degree of contamination, the filter capacity of the tap water is up to 5,000 (PURO) respectively 10,000 (PREMIUM) liters. A reduced water flow shows a decrease in the filter performance. The filter cartridges have to be replaced after 6 months (conforming ÖNORM EN 806-5 respectively DIN EN 806-5).

Disposal: The activated carbon in the cartridges is made of coconut shells. The used cartridges can also be disposed of with the residual waste.

Drinking water becomes a refreshing pleasure

Drink your filtered and optimized tap water. You also save a large part of the costs for bottled beverages and the associated transport effort.

FILTERED, OPTIMIZED DRINKING WATER

ewo

ewolution of water

Only the BEST for GOURMETS

Do you drink enough?

Since the human organism can only store water to a limited extent, a constant and sufficient supply of water is extremely important.

Many scientific studies indicate that lack of water is the cause of many physical complaints, restricts mental performance and accelerates the aging process.

Water is the source of life

The average water requirement of an adult is around two to three liters a day. Drinking too little can mess up the water balance. A minimal loss of water of only 2% of body weight reduces performance by 20%.

Drink more water again!

Drinking a lot makes you fit and capable!

Filter your water with high quality activated carbon and optimize it with the renowned EWO® technology for good and tasty drinking water from your water pipe.

- + easy installation
- + excellent optimization
- + neutral taste
- + easy to use

Water filtration through activated carbon and membrane

The high quality filter cartridges (Made in Germany) have a very large inner surface and therefore an extremely high capacity. Chlorine, bacteria, drug residues, heavy metals and many other things are removed

However, minerals remain in the drinking water!

Water optimization - EWO® sets standards

We combine vortex, information transfer and magnetism.

This enables us to achieve convincing results.

Trust in the power of nature.

EWO® GOURMET Set

The EWO® GOURMET series includes a filter housing with filter wrench and wall bracket, a filter cartridge of your choice, the necessary flexible hoses with connectors and the EWO® VITAL optimization module.

Choose one of the 3 options

PREMIUM - ELEGANCE - Set

incl. 3-way replacement faucet (various designs)

2l/min

10,000 liters or 6 months

The ELEGANCE faucet is installed instead of the existing faucet. Separate faucet for filtered water.

PREMIUM - SINGLE - Set

incl. **additional** faucet (various designs)

2l/min

10,000 liters or 6 months

The SINGLE faucet is installed in addition to the existing faucet.

BASIC - PURO - Set

Cartridge with a significantly higher flow rate

9l/min

5,000 liters or 6 months

To be used with an existing faucet. The entire cold water is filtered and optimized.
