

REFERENCE – drinking water / heating water Trodat GmbH, 4600 Wels, Austria

trodat[®]

Products: Drinking water: CLASSIC
Heating water: VITAL, HB

This company, which is certified according to the International Environmental Management Standard ISO 14001 and has its headquarter in Wels, has a special responsibility towards the environment.

"For years, we have placed great emphasis on environmentally relevant focus throughout the entire value added process. For this reason, we started to integrate EWO water optimization in 2005, prior to TRODAT's ISO 14001 Environmental Management System (EMS) project.

The successes and savings in the fields of fresh water supply, cooling circuits and heating system technology, which we were able to achieve with the EWO technology, are considerable.

We did not expect such a resounding success. The reinvestment period for the entire acquisition was only 1.5 years. Since then, we save about € 7500.- per year on chemicals and thus relieve the environment, the savings in maintenance and repair work are considerable.

We are more than satisfied with our decision to replace water additives with water optimization."

Ing. Herbert Pözlberger
Head of Facility Management at TRODAT Austria
