

REFERENCE – drinking water

Residential complex Rue du Dr. Pierre Schmidt, 67150 Erstein,
France

Products: DOLOMIT

Now only the lime problem in the drinking water had to be solved. The water has a hardness of 17.6 ° German hardness (pH-value 7.5) and was passed into the apartments without further treatment.

This was not a good solution in the long run, so the customer was offered a cost proposal with an EWO DOLOMIT. After the success with EWO in the heating system, the customer quickly gave his approval.

Since the installation of EWO DOLOMIT there is no salt or other products to manage. It occupies very little space in the basement and works without electricity. Break-downs are excluded, it does not need regular maintenance(except for changing the anode when it is indicated) and does not produce wastewater.

The water is now noticeably softer under the shower, it tastes better and the lime itself is now also unproblematic. Now you finally enjoy drinking tap water.
